SURGERY NEWS

COVID/Flu Clinics

The COVID/Flu clinics have been a great success this season. With the ability to coincide both COVID and Flu into a single appointment has streamlined the process meaning shorter waiting times for patients, and less impact on our core workforce. The surgery are immensely grateful for the support given by the PPG, their voluntary efforts have been integral to the smooth running programme of the clinics and the partnership/staff are extremely grateful for that. Due to the number of vaccinations given early on, it is anticipated that flu vaccines will continue to be ad-hoc from December wherever necessary, though the final Saturday clinic of the season will be Saturday 26th November.

HAVE YOU HAD ALL OF YOUR JABS YET? DON'T WAIT VACCINATE

Enhanced Access

The transition into the new contract for Enhanced Access on October 1st has been successful. The surgery now offer 9-5 appointments in conjunction with network surgeries Bluebell, Highwoods, Winstree and Lawford every Saturday. These appointments are prebookable and will consist of a mixture of GP, Nurse and Healthcare Assistant appointments. Previously we would be offering patients appointments 09:00 – 11:00 Saturday and 09:00 - 10:00 Sunday, so we feel although the Sunday's are now obsolete, that patient access has been increased significantly. We are also offering Enhanced Access in conjunction with the aforementioned surgeries every evening Monday to Friday 18:30 – 20:00, though once more this is prebookable so patients are to be advised not to treat the service as a 'walk-in' as the surgery itself will be closed unless patients have an appointment.

Staffing

Nurse Practitioner Linda G has retired from the NHS after 11 years of working with Mill Road Surgery. Linda was an asset to the surgery and will be missed, though she will now be able to spend her retirement Compiled by the Patient Participation Group (PPG)

enjoying life with her family. In Linda's place, we have recruited Tori who is due to start in December.

Tori will bring a lot of new skills to the Nurse Practitioner team, coming from Colchester Hospital we are looking forward to having her on board and are confident her kind manner will be popular with patients. Our Dispensary Supervisor Jess is now on maternity leave, and we welcome Clare who is an existing dispenser and currently acting supervisor whilst Jess is on maternity leave. Clare is doing a brilliant job in steering the ship of Dispensary. Katie has now left our dispensary team, we thank her for her support over the last couple of years and wish her well in her new role, and we welcome onboard Alev who is due to start in November. Alev joins the team with many years of experience within pharmacy and we are confident she will be an asset to the team once up and running.

Dispensary

Due to the staffing points mentioned above, there have been times where staffing has been light on the ground due to two full time members being absent, therefore we had made the decision to close dispensary on Tuesday afternoon and Thursday afternoon, hoping that it will have minimal impact on patients but will give the team the time necessary to continue tasks that result in the successful processing and collection of prescriptions. This closure is only temporary and we anticipate full operating hours will resume end of December/start of January. We thank patients for bearing with us at this time, both the Partnership and Practice Manager thank the team for all their efforts made to ensure the smooth running of Dispensary continues during times of workforce hardship, and are pleased to say this hardship is short lived.

Building Works

The surgery are looking to convert a large administrative room into two clinical rooms to increase staffing capacity and level with patient demand. This process will take time but we are pleased to say initial plans have been approved by NHS England and we are engaging with necessary stakeholders at present, with the hope for work to be carried out in the first half of 2023.

Are you prepared for Winter?

Cold weather can be a worry in later life. As we get older, our bodies respond differently to the cold which can leave us more susceptible to serious health problems. But with a little preparation, and by following some simple suggestions, you can stay healthy, safe and comfortable this winter.

Cold temperatures can raise blood pressure and increase the risk of flu and other lung-related problems. Our blood pressure takes longer to return to normal, and this can put you at greater risk of a heart attack or stroke. That's why it's so important to look after yourself in the winter.

Keep moving

Even if you don't feel like it, staying active will not only keep you fit and healthy, it will also generate heat to keep you warm. If it's not too cold, take a short walk in the middle of the day

Look for ways to keep active - get up and walk around, make yourself a warm drink and spread any chores throughout the day. Chair-based exercises are helpful if walking is difficult, along with moving your arms and legs and wiggling your toes.

Eat well

Hot meals and drinks help to keep you warm, so eat at least one hot meal each day and have hot drinks throughout the day. Having a hot drink before bed and keeping one in a flask by your bedside are good ideas too. Include a good range of foods in your diet and aim for five portions of fruit and vegetables each day so you're getting plenty of nutrients and vitamins. Remember that frozen vegetables are as good as fresh. Keep some basic food items in the cupboard or freezer in case it's too cold to go shopping. You could also do your food shopping online and get it delivered to your house. It's important to eat enough, especially in winter.

something more serious, such as pneumonia. If you're over 65, or if you have certain health conditions the Government recommends that you get the flu jab every year. Flu viruses are constantly changing so vaccines are updated each year.

You can get a free flu jab from your GP and some pharmacies if:

- you're 65 or over you receive Carer's Allowance, or you are the carer of a person whose welfare will be affected if you become unwell
- you have a long-term health condition such as diabetes, a heart condition, asthma or lung disease, a kidney or liver problem, Parkinson's, or if you have had a stroke
- you are living in a long-stay residential care home Check if you've had the 'pneumo' jab
- The 'pneumo' (or pneumococcal) jab is a one-off jab that helps protect you against pneumonia, meningitis and septicaemia (a type of blood poisoning). If you're over 65 and haven't had one, ask your GP.

Keep your hands clean

Good hand hygiene is a simple way to avoid getting colds or flu and stop it spreading to other people. Wash your hands regularly with soap and warm water, or use alcohol-based gel or wipes. Make sure to clean surfaces you are in contact with regularly, like your telephone, door handles and keyboard as germs can live on them.

Organise your medications

It's important that you don't run out of your medications. Make sure you order prescriptions ahead of time, just in case there is bad weather or you're too unwell to go to the pharmacy. Also ask your pharmacy if they can deliver to you, if they don't usually do this.

It's also a good idea to keep a supply of simple cold, flu and sore throat remedies at home.

Home safety

Get your heating system serviced every year by a qualified professional to ensure it's running safely. Put guards on open fires, and be careful not to hang washing too close to the fire. Don't block up air vents. Fires and heaters need ventilation. Keep a torch handy in case you lose power and keep your radio, mobile phone, laptop or tablet fully charged, so you can use the battery power if there's no electricity.

>>>>>> Continued

Keeping warm inside

If you're sitting down, a shawl or blanket will provide a lot of warmth. Try to keep your feet up, as the air is cooler at ground level.

Wear warm clothes in bed. When it's very cold, wear thermal underwear, bed socks and even a hat – a lot of heat is lost through your head.

Use a hot-water bottle, wheat bag or an electric blanket to warm the bed. Never use a hot-water bottle and an electric blanket together as this can be dangerous.

Check whether your electric blanket can be kept on all night. Some blankets should only be used to warm the bed before you get in. If you have continence difficulties, talk to your doctor before using one.

Keeping warm outside

Make sure you keep your hands and face warm. As well as wearing gloves and a hat, always wrap a scarf around your face when you go outside, even if it's only for a short time. This helps to warm the air you breathe. Several thin layers of clothing will keep you warmer than one thick layer, as the layers trap warm air.

Clothes made from wool or fleecy synthetic fibres such as polyester are a better choice than cotton. Start with thermal underwear, warm tights or socks. Keep your feet warm. Choose boots with non-slip soles and a warm lining, or wear thermal socks.

How can I heat my home efficiently?

Close the curtains in the evenings and fit thermal linings if you can. This will keep the heat in. Keep

your bedroom window closed at night when the weather is cold. The coldest time of the day is just before dawn and breathing in cold air increases the risk of chest infections.

Keep your main living room heated to 70°F (21°C). Heat your bedroom to 64°F (18°C).

Energy-saving light bulbs are just as bright as the alternatives, and will save you money. You should

also evaluate where your furniture is positioned. If a sofa or armchair is in front of a radiator.

This will absorb the heat rather than it spreading across the room. Placing draft excluders in front of doors will help keep the heat in the room.

Often, electricity is cheaper at night when demand is lower. Get to know how the timer and thermostat settings on your dishwasher, washing machine and tumble drier works to get them to come on after 10pm.

STAY WELL STAY WARM.

Recycle your used blister packs

You can now recycle your used blister (tablets) packs at the surgery. Simply bring your used packs the next time you visit the surgery and hand them to reception or the dispensary.

Please note, used blister packs cannot be recycled using the kerbside collections provided by the Council. A request has been made for the Colchester BC website to be updated as it is currently ambiguous.

SWITCH OFF TO TAKE CARE OF YOUR AIR

Where possible for local patients, please walk to the surgery to allow more parking spaces When transporting patients to and from the surgery PLEASE swich off your engine while embarking and disembarking your patients.

Also Please do not park in front of the gated area, as contractors for any hospital re-ferbishment work, are continuously in need of the use of that area.

SUGGESTION BOX

How can we improves the service that we currently offer?

County surveys show that over recent years the Mill Road Surgery has been very successful in prviding a high quality of service, (we are currently top in the last survey and in the top three previously).

Our aim is to continue to provide a consistant 1st class service to all patients and visitors to the Surgery.

We would appreciate any constructive idears for us to continue to do so.

Please forward any such suggestion to: Mill Road Surgery Patiant Participation Group (PPG) who are here to promote co-operation between the practice and patients.

VAPING & SMOKING

Is vaping harmful?

Experts agree vaping is substantially less harmful than smoking but it is not risk-free. Vaping exposes users to fewer toxins and at lower levels than smoking cigarettes.

Switching to vaping significantly reduces your exposure to toxins that can cause cancer, lung disease, and diseases of the heart and circulation like heart attack and stroke.

Long-term effects of vaping

Vaping has not been around for long enough to know the risks of long-term use. This includes the long-term effects of inhaling the flavourings in vapour. While vaping is substantially less harmful than smoking, it is unlikely to be totally harmless.

Ideally, if you are vaping to quit smoking, you should aim to eventually stop vaping too.

The healthiest option is not to smoke or vape.

Best Wishes for Christmas
& a Healthy New Year
